

COMMUNITY HEALTH NEEDS ASSESSMENT TOP HEALTH PRIORITIES

- 1 Physical activity / nutrition
- 2 Access to health care
- 3 Mental health / substance abuse

COLLABORATION EXAMPLE

"Key Franklin County stakeholders spent the past five years carefully analyzing the health care needs of underserved residents, available resources and collaborative partnerships to address these needs. As a result, the community identified its preferred partner, Health Partnership Clinic, an existing federally-qualified Community Health Center, to establish a New Access Point satellite clinic in Franklin County."

ADDRESSING COMMUNITY HEALTH PRIORITIES

"HPC has worked diligently with area partners to increase access to health care in the community. This includes significantly expanding HPC's capacity and addressing area needs, such as mental health/substance abuse services. HPC has added 4.0 FTE behavioral health consultants and 1.0 FTE substance abuse provider during the past two years."

COMMUNITY PARTNERSHIPS

HOSPITAL "contribute lab/radiology and financial resources...connect the health care continuum for patients..."

HEALTH DEPARTMENT "strong relationships...work closely to accept referrals and provide onsite services..."

MENTAL HEALTH CENTER "work closely to maximize resources and connect patients to care...refer patients..."

PRIVATE PRACTICES "provide onsite dental services"

OTHER "memoranda of agreement with 40 area partners...foster care providers, school districts, Head Start, homeless shelters..."

CARE COORDINATION & PATIENT-CENTERED MEDICAL CARE

"HPC employs 5.0 FTE Care Coordinators who assist patients with their care plans. Care coordinators play a key role in the patient-centered medical home model of care, helping those who face disparities and barriers to achieving optimal health. Care Coordinators are part of the medical team and provide patient education, follow-up services and assist patients with achieving their health care plan goals. "

USING GRANT FUNDS TO IMPROVE PATIENT CARE

"HPC utilizes state Primary Care Clinic grant funding for clinical services provider and support staff, which carry out the recommended primary and preventive care such as diagnostic screenings, tracking/monitoring health outcomes overtime, and connecting patients with the resources they need to improve their overall health and quality of life. HPC's EHR system, eCW, is used to monitor and track compliance with recommended screenings to improve health outcomes."
